GROUP SHARING RECOMMENDATIONS

At the end of your group lab, get group members to access their lesson to review and accept the shared group work.

Remind students that work must be accepted for them to be included in the group session. Students will not receive grades for unaccepted work.

Accepting shared work overwrites the students current version with the shared version.

Set appropriate commit times. Once the lesson is committed by an instructor, students will require an extension to accept shared group work.

LMS

When using LMS deeplinks, Set LMS reminders to notify students of due dates informing them to review and accept group work.

GROUP LEADER

The Group leader is the student who is sharing the work. Work can be shared by any student at any stage.

GROUP MEMBERS INCLUDING GROUP LEADER

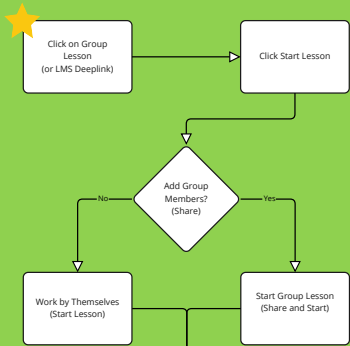

Students who participate in the session. Group Members can become group leaders by sharing their version of work.

WHAT WORK IS SHARED?

Each time the group leader enters a group lesson, a new 'session' is created. Work shared will be the Group Leaders current version of data and all completed questions for the shared session.

eg. A student is added to session one. The group leader ends session one and re-enters the lesson to complete additional work (session two). The student will have access to the work shared in session one when they log in to accept work. They will not be able to see the additional work for Session two unless the group leader shares the work for that session as well.
